fertil top

Complete slow release fertiliser
16-8-10+4 MgO+trace elements

- **FOR FIELD AND GROWN NURSERY STOCK**
- **FOR FLOWER BEDS AND GREEN SPACES**
- **RELEASES OVER 2 TO 4 MONTHS**
- **VERSATILE AND SAFE TO USE**

Product description

FERTIL TOP is a slow release fertiliser having a high available nutrient content. Urea formaldehyde represents 13% of the fertiliser's weight (more than 80 % of the total nitrogen) depending on the formulas. The nitrogen compositions were especially designed to allow a regular feeding of the plant, thanks to an optimal balance of the nitrogen brought on an ammoniac and ureic form on one hand and on the other hand, the different fractions of the urea folmadehyded nitrogen. Thanks to a very good balance between the different presentations of the nitrogen and the contents brought by potassium, phosphoric acid and magnesium, FERTILTOP is a complete fertiliser. It is adapted to the different uses for nurseries and green spaces.

Advantages and performance

- Designed specifically for top dressing, it is carried quickly into the soil or substrate from the first watering after application.

- The evenly sized granules allow for accurate application on pots or the soil surface.

- It provides all of a plants necessary nutrition for 2-4 months.
- On nurseries, it provides a useful boost to young transplants or for stock entering its' second season of cultivation.
- Fast acting, it gives a quick start, or a rapidly greens up foliage in total security, with little danger of scorch when following the recommendations for use.
- FERTIL- TOP can be applied to all horticultural substrates and soil types.
- Economical, when applied as a top dressing wherever plants need it.

Fields of application

SOIL-LESS MEDIA FOR NURSERY STOCK

Use FERTIL- TOP for top dressing plants entering their second season of growth.

For transplants during the autumn or spring, apply FERTIL-TOP as a top dressing when incorporated controlled release fertiliser is slow to release.

Applied once or twice between May and August, according to need, to assure optimal growth up to autumn.

For plants entering their second season, FERTIL-TOP is applied as a top dressing at the end of winter, ensuring that early growth is strong with healthy foliage; particularly important for conifers and trees sold in the spring.

FERTIL-TOP can be incorporated to potting mixes in late winter/early spring to act as a 'starter' for early growth. FERTIL-TOP on its own can be incorporated into composts for short term crops, or in association with NUTRICOTE or other controlled release fertilisers for longer term crops. It includes all of the nutrition needed by plants in the first weeks after potting even if temperatures are relatively low.

FIELD GROWN NURSERY STOCK, FLOWER BEDS, FLOWER BOXES...

For field grown stock, FERTIL-TOP may be spread in spring along crop rows or on tree and conifer beds to encourage re-growth of stock after winter. FERTIL-TOP may be used with complete security on green spaces for feeding lawns, tree beds and planters. It can be spread, top dressed or incorporated for beds, planters, pots, lawns, etc...

TOP DRESSING CONTAINERS AND BEDS.

For quick and even application, you should use top dress FERTIL-TOP with a calibrated applicator, or for even better results with an injection/applicator. Apply the fertiliser to a moist substrate. Irrigate after top dressing to allow the granules to start releasing immediately. Analyse the substrate to check the existing fertility before calculating the correct dosage to apply.

INCORPORATION IN COMPOSTS FOR POTTING-ON

Mix the compost well to ensure an even spread of ingredients. Use the mix promptly, do not store for more than 2 weeks. Take any other artificial or organic fertiliser, or any other source of nutrition into account when calculating the correct rate of FERTIL-TOP to use.

Instructions of use

SPREADING ON OPEN GROUND NURSERY STOCK, FLOWER BEDS AND LAWNS.

Apply the fertiliser evenly to the soil surface. Only apply the fertiliser when foliage is dry.

Characteristics

- Packaging: pallet of 40 25kg bags.
- 750.00 : 16-8-10+4MgO+ trace-elements with 13 UF
 - 751.00 : 12-4-22+3MgO with 8 UF
 - 753.00 : 20-5-8 +3MgO with 10 UF
 - 754.00 : 15-9-15 +3MgO with 5 UF
 - 752.00 : FERTIL TOP PLUS 18-6-12 + 3MgO (3-4 months)

Rates of use

Soil-less media for nursery stock – Dosis given for 16-8-10 and 18-6-12. For the 12-4-22, you should lower the dosis of 25%. Don't use it on 20-5-8 and 15-9-15.					
Incorporation	As the only feed		In complement with NUTRICOTE		
Sensitive plants	1 à 2 g/L (kg/m ³)		Consult us		Please mix evenly. Please use quickly after mixing (less than two weeks).
Vigorous plants	3 à 4 g/L (kg/m ³)		0.5 à 1.5 g/L (kg/m ³)		
Top dressing during growth	As a booster to newly potted-on plants		As the start of the second season		
Sensitive plants	1 à 1.5 g/L (kg/m ³)		1.5 à 2 g/L (kg/m ³)		Apply the fertiliser on a wet substrate. Please use the dosing tools. Water after use to stick the fertiliser to the substrate.
Vigorous plants	1.5 à 2 g/L (kg/m ³)		2 à 3 g/L (kg/m ³)		
Other uses in g/L/m ² - multiply it by 10 to get the dosis in kg/ha					
	16-8-10	12-4-22	20-5-10	15-9-15	
Open grounds	40 à 80	30 à 60	30 à 45	25 à 35	Depending on the season, the type of crops and the previous feeding programs done previously
Lawns					
Pots and planters	1 à 4 g/L (kg/m ³)	2 à 2.5 g/L (kg/m ³)
